# 1 Graphs

## Search

### BFS

```
1 int dist[MXN];
2 vector<int> adjList[MXN];
3
4 int main(){
5     for(int i = 0; i < MXN; i++){
6         dist[i]=INF;
7         queue<int> q;
8         q.push(0);
9         dist[0] = 0;
10        while(!q.empty()){
11            int u = q.front(); q.pop();
12            int d = dist[u];
13            for(int i : adjList[u]){
14                if(dist[i]==INF){
15                    dist[i]=d+1;
16                    q.push(i);
17                }
18            }
19        }
20        return 0;
21 }
```

### Dijkstras

```
1 struct path {
2     int u,d;
3     bool operator < (const path& p) const {
4         return d > p.d;
5     }
6 };
7 for(int i =0; i < N; ++i)
8     dist[i] = INF;
9 dist[S] = 0;
10 priority_queue<path> q;
11 q.push(path{S,0});
12 while(!q.empty()){
13     path p = q.top(); q.pop();
14     u = p.u,d = p.d;
15     if(dist[u] < d)
16         continue;
17     for(auto v : adjList[u]){
18         nd = d + v.second;
19         if(nd < dist[v.first]){
20             dist[v.first] = nd;
21             q.push(path{v.first ,nd});
22         }
23     }
24 }
```

### A\*

```
1 struct path {
2     int u, wght;
3     bool operator<(const path& rhs) const {
4         return wght > rhs.wght;
5     }
6 };
7 int h(int x) { // heuristic function
8     // Don't overestimate, should be 0 at sink
9     return 0; // 0 for djikstras
10 }
11 for(int i =0; i < N; ++i)
12     dist[i] = INF;
13 dis[S] = 0;
14 priority_queue<path> pq;
15 pq.push({s, h(s)});
16 while(!pq.empty()){
17     path p = pq.top(); pq.pop();
18
19     if(p.u == t)
20         return p.wght;
21
22     int d = p.wght - h(p.u);
23
24     if(dis[p.u] < d)
25         continue;
26
27     for(auto v : adjList[p.u]) {
28         int nd = d + v.second;
29
30         if(dis[v.first] <= nd)
31             continue;
32
33         dis[v.first] = nd;
34
35         pq.push({v.first , nd + h(v.first)});
36     }
37 }
```

### Bidirectional BFS

```
1 int bidirbfs(){
2     queue<int> fq, rq;
3     fq.push(S); dis[S] = 0;
4     rq.push(T); disr[T] = 0;
5
6     vector<int> proc;
7     for(;;){
8         if(fq.empty() && rq.empty())
9             return -1; // disconnected
10        if(!fq.empty()){
11            int u = fq.front(); fq.pop();
12            for(int v : adjList[u]){
13                if(dis[v] <= dis[u] + 1)
```

```

14         continue;
15         dis[v] = dis[u] + 1;
16         fq.push(v);
17     }
18     vis[u] = true;
19     proc.pb(u);
20 }
21 if(!rq.empty()){
22     int u = rq.front(); rq.pop();
23     for(int v : RadjList[u]){ // REVERSE adj
24         if(disr[v] <= disr[u] + 1)
25             continue;
26         disr[v] = disr[u] + 1;
27         rq.push(v);
28     }
29     if(vis[u])
30         break;
31     proc.pb(u);
32 }
33 }
34
35 int mn = INF;
36 for(int u : proc)
37     if(dis[u] != INF && disr[u] != INF)
38         mn = min(mn, dis[u] + disr[u]);
39 return mn;
40 }

```

## Trees

### MST

```

1 struct edge {
2     int x,y,w;
3     bool operator < (edge e) const {
4         return w < e.w;
5     }
6 };
7
8 int main(){
9     vector<edge> eList; //Input
10    for(int i = 0; i < N; i++)// Set up UFDS
11        p[i]=i;
12    vector<ii> treeList;
13    sort(eList.begin(),eList.end());
14    int cost = 0;
15    int sz=N;
16    int u,v,w;
17    for(const auto &i : eList){
18        v=i.x; u=i.y; w=i.w;
19        if(!connected(u,v)){
20            join(u,v);
21            treeList.push_back({min(u,v),max(u,v)});
22            sz--;
23            cost+=w;

```

```

24     }
25 }
26 if(sz!=1)
27     puts("Impossible");
28 }

```

### LCA

```

1 /*
2  * H[u] is first visit of u
3  * E[x] is vertex at time x
4  * L[x] is depth at time x
5  * MEMSET H to -1
6  * SET L to size of list * 2
7  */
8 int vind;
9 void vis(int u, int d){

4         return 1LL;
5     if (b%2==0){
6         ll y = modExp(a, b/2, mod);
7         return (y*y)%mod;
8     }
9     return (a*modExp(a, b-1, mod))%mod;
10 }
11
12 // a*b^-1 % mod
13 // mod should be prime
14 ll modDiv( ll a, ll b, ll mod) {
15     return (a * modExp(b, mod-2, mod))%mod;
16 }

```

## Theorems

### Burnsides Lemma

Let  $G$  be a finite group that acts on a set  $X$ . For each  $g$  let  $X^g$  denote the set of elements in  $X$  by  $g$ .

$$X^g = \{ x \in X \mid g.x = x \}$$

Then the number of orbits is as follows

$$|X/G| = \frac{1}{|G|} \sum_{g \in G} |X^g|$$

### Polya's enumeration theorem

Let  $X$  be a finite set and let  $G$  be a group of permutations of  $X$ . Let  $Y$  be a finite set of colors so that  $Y^X$  is the set of colored arrangements of  $X$ . Then the number of orbits of  $Y^X$  under  $G$  is

$$|Y^X/G| = \frac{1}{|G|} \sum_{g \in G} |Y|^{c(g)}$$

where  $c(g)$  is the number of cycles in permutation  $g$ .
